

Installing Fonts in Windows 7

Here are step-by-step instructions for installing fonts into a Windows 7 operating system. Keep in mind that you must be an Administrator on the computer to install fonts.

Option 1

The easiest way to install a font is to double-click on a font file to open the font preview and select 'Install'.

To install a specific font right-click on a font file, and then select 'Install'.

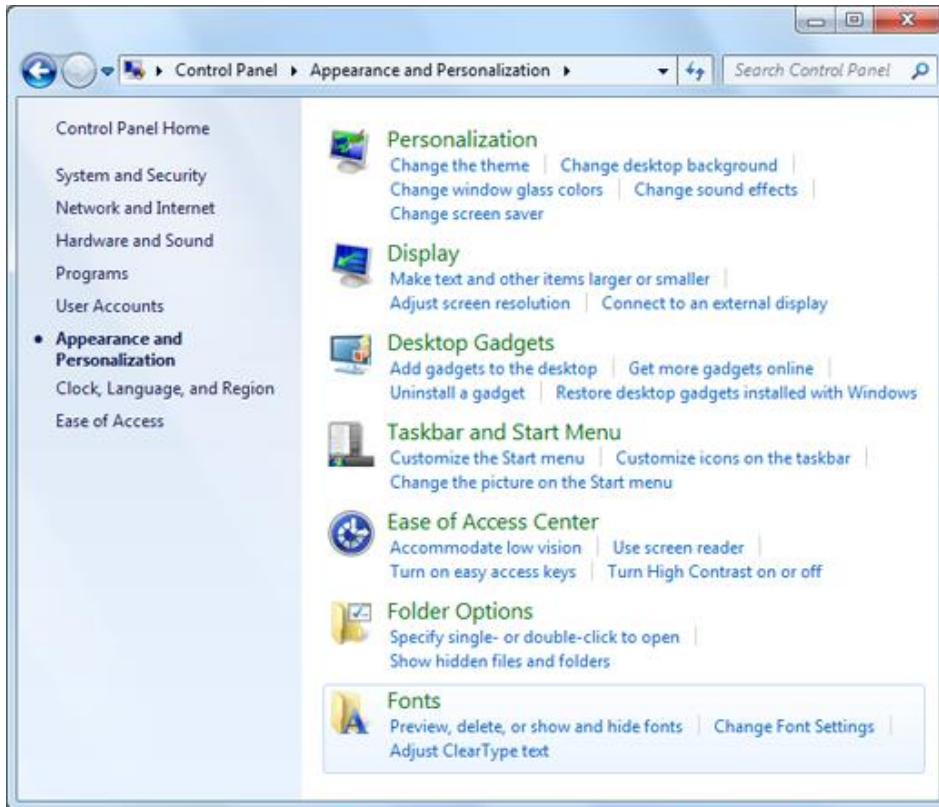

Option 2

Another option is to install fonts with the Fonts Control Panel.

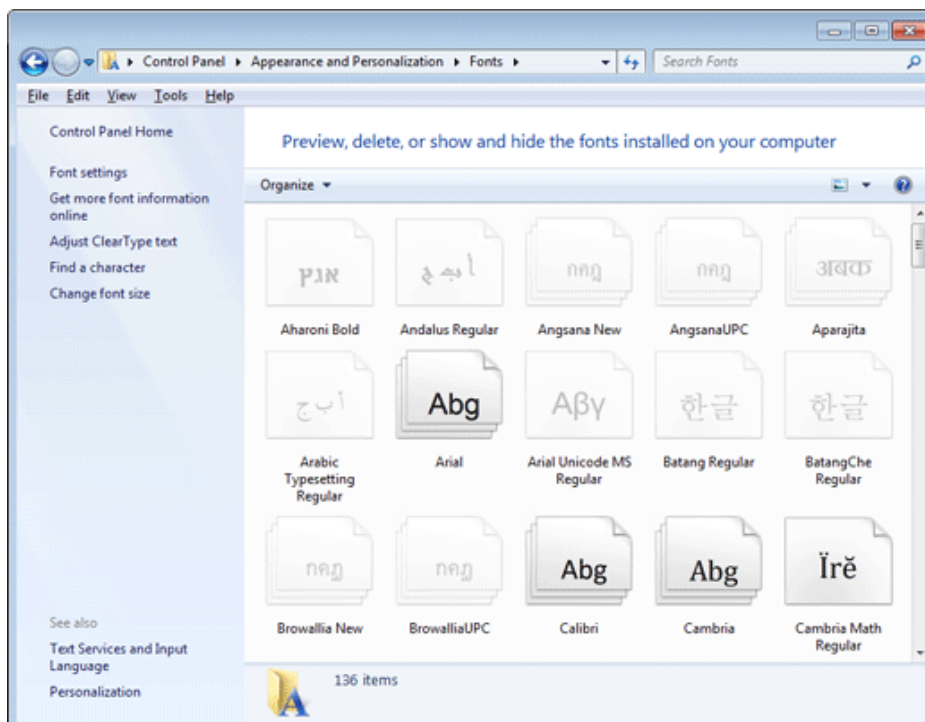

1. Select *Control Panel* from the *Start* menu, then select the *Appearance and Personalization* category.

2. Select 'Fonts'

3. Drag a font file and drop it into the Fonts Control Panel.

Note: if you receive an error message make sure the font file is not compressed (it should not have a zipper icon). Also, make sure you have Administrator privileges (Control Panel/User Accounts).
